

General Administrative Guidelines

Detailed operating reference for enrollment, payment verification, class monitoring, completion clearance, controlled document release, privacy, and recovery.

- Using Guide Search and online references
- Access, roles, and shift control
- Enrollment intake
- Payment and receipt verification
- Class monitoring and changes
- Completion Audit
- Refund reconciliation
- Approval and document release
- Backup and recovery
- Privacy and incidents
- Quick checklists

Using Guide Search and reviewed online references

Open Admin → Governance → General Guidelines. Guide Search understands ordinary task descriptions, casual English, common abbreviations, partial phrases, and selected misspellings. It searches the local guide rather than requiring exact policy wording.

Examples of questions

- “I cannot log in”
- “Why is clearance pending?”
- “Student paid too much”
- “How do I find an old record?”
- “Receipt does not match”
- “Certificate has the wrong name”
- “What does not yet competent mean?”
- “How do I restore a backup?”

How matching works

- The app simplifies punctuation and casual wording.
- It recognizes related operational words, abbreviations, word fragments, and small spelling errors.
- It ranks the closest guide topics and returns exact steps plus common problems and solutions.
- If no close match appears, use fewer words or one of these task words: payment, receipt, enrollment, trainer, audit, refund, certificate, backup, archive, password, or offline.

When internet is available

Relevant topics may show reviewed links to official resources such as TESDA, the Philippine National Privacy Commission, the Official Gazette, or Bangko Sentral ng Pilipinas. Opening a link is optional and leaves the app. The typed Guide Search question is not attached to the link or transmitted. External resources provide current regulatory or language context; the app's record-specific validation and CSDA-approved procedure remain authoritative for operating the toolkit.

When offline

All local guide answers, steps, troubleshooting, and process explanations remain available. Only the external reference pages require a connection.

1. Access, roles, and shift control

Opening a session

- Use an approved CSDA device and browser profile.
- Enter your own full name at every Admin sign-in. Confirm the displayed identity before changing a record.
- Do not share the current Administrator password or place it in printed guides.
- During credential setup, store the one-time recovery key in CSDA's approved offline credential record, separate from app backups. The app does not retain the clear key.
- If recovery is used, securely replace the stored key because the old key is invalidated and a new one is shown once.
- Begin in Today / Work Queue. Use the Admin sidebar groups—Daily Work, Catalogue, Operations, and Governance—to reach the correct workspace. Class Monitor opens in its own operational window.
- At shift opening, review pending payment verifications, unresolved Done audits from oldest to newest, and recently invalidated clearances.
- Confirm that the most recent protected backup is appropriate for the current volume and risk of work.

Role attribution under the shared Admin login

The app uses named role attribution rather than separate role accounts. The person performing an action must be identified honestly. Trainer and academic names come from the enrollment record; final approval records the active Administrator.

2. Enrollment intake and quality control

Learner identity, private profile photo, and age path

The Student tab provides a right-side profile-photo panel. Authorized staff may upload an image or use the in-app camera, then adjust zoom and horizontal/vertical placement. The optimized photo is retained only in the private student record and protected backup; it is not printed on the enrollment form.

- Legal name spelling and order match the learner's supporting information.
- Birth date is correct and produces the correct minor/adult path.
- Email, phone, and address are current.
- Minor: parent/legal guardian and guarantor details are complete.
- Adult: Emergency Contact is used when contact information is provided.

Course, price, and schedule

- Correct course or course bundle is selected.
- Dates, times, instructional hours, and delivery expectations are reviewed.
- Assigned trainer is selected from the enrollment form.
- Discount is eligible for the course type. Short courses and workshops may use only Group of 3+ or Early Bird discounts.
- Totals are reviewed before payment expectations are communicated.

Finalization

- Move through all six steps and resolve validation messages.
- Use Finalize and create PDF.
- Compare the PDF against the saved record before releasing it.
- If incorrect, return to the form and correct the source record; do not edit the PDF externally.

3. Payment and receipt verification

Required transaction data

Every payment must include date, amount, method, reference/transaction number, notes, and a readable receipt image. On a supported phone or tablet, staff may open the embedded in-app camera, capture and review the receipt without leaving the workflow, or choose an existing image. Review framing and readability before saving.

- Open the receipt and transaction data.
- Check the actual GCash, bank, or merchant portal. A screenshot is supporting evidence, not independent confirmation.
- Compare amount, date, payer, and reference.
- Approve only when reconciled. Otherwise keep pending or reject with a clear operational note.

4. Class monitoring and enrollment changes

The timeline consists of Scheduled, Ongoing, Almost Done, and Done. Almost Done means one or two sessions remain.

- Use automatic schedule status unless an authorized correction is necessary.
- A manual timeline move changes schedule state only. It does not alter payment, academic, trainer, or final Admin approval.
- When a record enters Done, open the audit immediately or process the oldest unresolved Done record first.
- Use Open and edit full enrollment for corrections.
- After saving, review the official timestamped change entry, recomputed total, course list, schedule, and hours.

5. Completion Audit

Record-specific pending list

Read every item under Certification Clearance Pending. It identifies missing evidence and gives the action needed for the open record. A disabled approval button means at least one gate remains unresolved.

Financial gate

- Enrollment balance is fully covered by approved payments.
- Every approved payment has a receipt.
- Any overpayment refund is issued, documented, and confirmed.

Academic gate

- Enter a working portfolio/archive link.
- Open and review the evidence.
- Press Confirm portfolio verified. The academic sign-off name is automatically taken from the learner's enrollment.

Trainer gate

- Enter the official completion/performance report.
- Record either COMPETENT or NOT YET COMPETENT.
- Resolve attendance.
- Press Confirm trainer report verified. The name comes from the assigned trainer.

Status and progress

The enrollment must be Active. Dropped or Cancelled records are document-ineligible. Use Save audit progress when stopping before approval. If confirmed evidence changes, review and confirm that section again.

6. Refund reconciliation

- Use the automatically calculated overpayment amount.
- Issue the refund through an authorized external channel.
- Enter the exact amount and reference.
- Upload the refund receipt.
- Independently match the receipt and transfer, then press Confirm refund completed.

7. Final approval and controlled document release

- Read the pending list again and independently review all supporting records.
- Enter the current Final Admin password only after the review.
- Select Approve clearance and generate documents.
- Compare the Clearance Form and Certificate previews with the source record: learner, course, hours, trainer, approving Administrator, and date.
- Use each document's separate Print / Save action.
- Distribute only to authorized recipients through an approved channel.

Trainer time and generated calendar assignments

Assign a default trainer immediately beside every selected course. Generated sessions inherit that course-level trainer. Admin may still change any individual generated session afterward.

When multiple individual trainers are assigned, instructional time is divided equally: two trainers receive 50/50, three receive approximately one-third each, and so on. The generated calendar proposes sequential session blocks and highlights where each selected course ends. Admin may choose a different trainer on any generated session and may manually adjust assignment dates and times. Treat the suggested next date as guidance;

resolve availability, holidays, and clashes before finalizing.

8. Backup, import, and recovery

- Create password-protected full-session CSV ZIP backups at regular checkpoints.
- To restore, enter the backup password and choose Import Session ZIP. The app extracts and verifies all related CSV tables and referenced media, decrypts the complete session, adapts recognized content to the current version, and previews counts before offering Replace or Merge.
- After guarded removal, the app marks restoration as recommended when that marker remains available. For security, the browser cannot reopen a downloaded ZIP automatically; select the retained ZIP manually.
- Store backup files and passwords separately.
- Before import, note current record counts and create a fresh backup when possible.
- Preview recognized contents. Choose Replace only for deliberate restoration; choose Merge when retaining local data.
- After import, verify a sample of enrollments, payments, receipts, schedules, trainers, audit history, and artwork.
- To remove the app and local data, use the guarded removal control. Enter the Administrator password, allow the mandatory full backup ZIP to download, confirm safe custody of the ZIP and password, then authorize local clearing. Finally use the browser or device menu to uninstall the PWA itself.

9. Privacy, exceptions, and incidents

Privacy

- Access only records needed for assigned duties.
- Do not copy learner, guardian, receipt, or payment data to personal devices.
- Use approved distribution channels and recipients.
- Close Admin access on shared devices and avoid leaving records visible.

Policy exceptions

Never invent evidence or bypass a gate. Escalate genuine exceptions to authorized CSDA management and preserve the decision, authorizer, date, reason, and affected record in official notes.

Incident response

- Stop the action that could worsen the issue.
- Preserve the current record and relevant audit history.
- Record what happened, when, who observed it, and which records may be affected.

- Notify authorized management or the designated privacy/security contact.
- Do not delete evidence or restore a backup until authorized.

10. Quick checklists

Before final clearance

- Enrollment is Active.
- Payments cover the net total.
- Every approved payment has a receipt.
- Refund is issued and confirmed when applicable.
- Portfolio link works and is confirmed.
- Trainer report is complete.
- Either competency result is recorded.
- Attendance is resolved.
- Pending list has no unresolved gate.
- Administrator independently reviewed the record.

End of shift

- Active work is saved.
- Pending payments and audits are identified for follow-up.
- Protected backup is created when required.
- Exports and printed documents are secured.
- Admin access is closed on shared devices.
